

There Is Something Important

Dear Customer,

Sincerely thank you for your support and trust in our products, we will continue to work hard to provide better and more friendly products.

For humanitarian, our bark collar does not electric shock function. Although we have made the product's vibration ability strong enough, due to the different sensory abilities of each dog, there are still 3%~5% of dogs that do not respond to the use of bark collar (whatever brand).

But don't worry, we won't make you lose anything. If you find such a problem, we will be very grateful that you contact us, and we will properly solve the problem for you.

Best wishes to you and your family for every happy day.

Smart Dog Bark Control Collar

User Manual

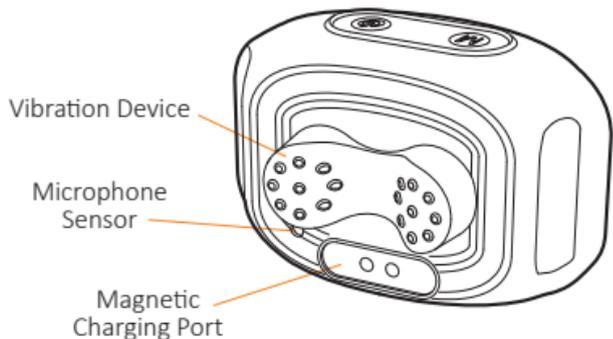

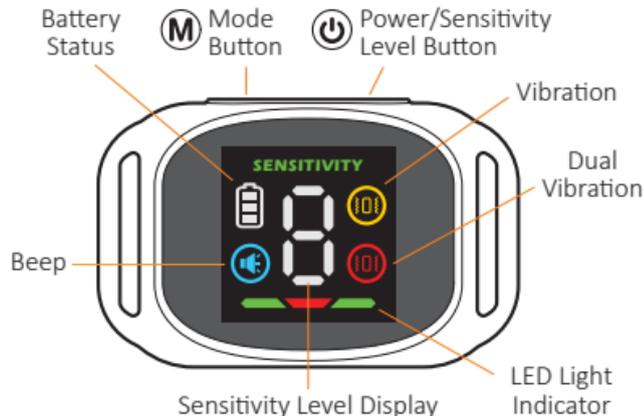

Effective and Safe Dog Bark Control Collar
with Advanced Technology

Important Safety Information

1. **WARNING:** please charge the product with a 5V Output charger only!
2. This item is suitable for dogs weighing less than 5-18 lbs. Do not use it with aggressive dogs. Please use it under supervision.
3. Please do not leave the product on dogs for more than 12 hours. Prolonged wear is the reason why training collars on the market can leave scars on a dog's neck. Please do not tie the leash to the collar.
4. Check the exposed area daily for rashes or sores. If you notice it, stop using this product immediately until the skin heals.
5. Environmental noise, temperature, breed or the dog's size may affect the effectiveness of an anti-bark collar. For more information, please refer to the relevant sensitivity level recommendations.
6. If you don't use it for a long time, charge the collar once a month.
7. If the battery is exhausted, it will take more than 50% of the time to activate. (in this case, the battery will not be damaged)
8. Keep the charging port dry before plugging in the cable and charging the collar!
9. **1 Year Warranty:** If you have any questions about the collar, please check this manual first. If you cannot solve the problem, please contact us by email.

Charging

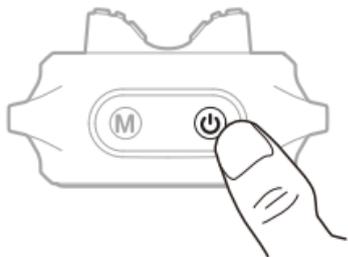

Please fully charge the bark control collar before you use

- When there is a low battery, please charge it in time;
- Please use an adapter (within an output voltage of 5V2A) to charge the product. Otherwise, it may cause permanent damage to the product.
- It is recommended to connect to a computer USB interface, a mobile phone charger or a mobile power supply for charging to meet the product charging input requirements.

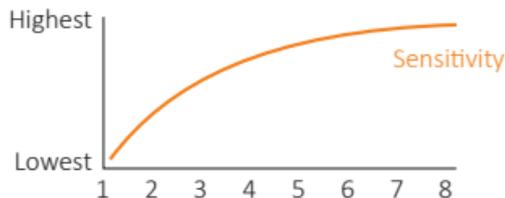

Product Usage

1) Sensitivity

Long press the Power Button  to power ON, and short press the Power Button  to select sensitivity.

1. Long press the **Power Button**  to power ON. While running, short press the **Power Button**  to adjust the bark recognition sensitivity of the product.
2. Levels 1-8 are the adjustment of the bark recognition sensitivity of the product, 1 is the lowest sensitivity value, and 8 is the highest sensitivity value.

Product Usage

3. The barking collar adopts an intelligent recognition IC, which can identify the barking frequency and decibel of the dog. However, in the actual application environment, some dog barks may be special, and a small part of dog barks may be similar to the dog bark frequency in the actual environment, so we recommend the following methods of use.

2) Working Mode

Stay with your dog during the initial period of use as it needs to get used to the product.

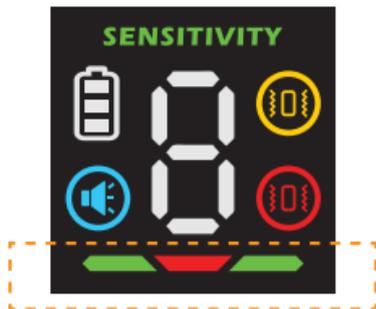

We do not recommend using bark collars when playing with other dogs. Dogs bark easily because they get excited when they are playing.

When wearing the product for the first time, please choose the 5-level recognition, which is the medium sensitivity level.

If certain sounds can activate the product, the frequency of the sound may be similar to that of a dog barking. If the dog is in such a sound environment, the sensitivity can be appropriately reduced.

The bark collar collects most of the barking. If your dog's barking sometimes fails to activate the product, you can try to increase the level.

LED Light Indicator

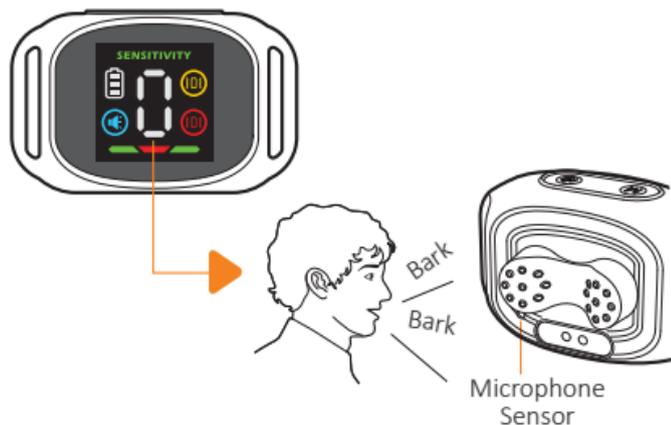

- The green light blinks once for 5 seconds in the standby state, and the red indicator blinks once for 5 seconds in the low battery status.
- **Beep + Vibration Mode:** Green light on
- **Beep + Dual Vibration Mode:** Red light on after Green light on

Test The Bark Control Collar

1) Test the Bark Control Collar

1. Long press the Power Button  for 2 seconds to turn ON the device.
2. **Short press the Power Button  again to adjust the sensitivity to the Level 0.**
3. Short press the **Mode Button "M"** to select **Beep + Dual Vibration Mode.**
4. After that blow or imitate barking towards the microphone sensor (located at the back of the device) to trigger the operation.

Test The Bark Control Collar

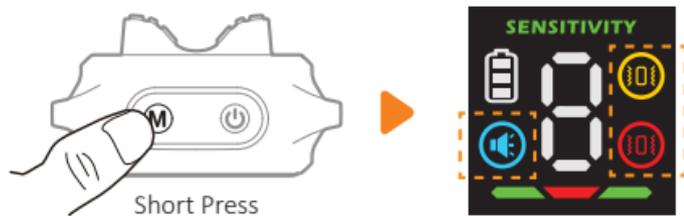

2) The Bark Control Collar Responds

When the device be triggered the operation, it will Beep and Vibrate. After test successfully, the Sensitivity Level would back to Level 5.

Mode Select

Short press the **Mode Button "M"** to select different Mode. The screen will display the corresponding icon.

	The working time of Beep Mode is 3 seconds
	The working time of Vibration Mode is 3 seconds
	The Beep Mode + Vibration Mode is beep for 2 seconds, then vibrate for 2 seconds
	The Beep + Dual Vibration Mode is beep for 2 seconds, vibration for 2 seconds, then double vibration for 2 seconds

At this point, you have completed all the settings. Next, you need to wear the product correctly on the dog's neck. Wrong wearing method may cause product damage and adverse reactions to the dog, as well as affect the use effect.

Fit The Collar

Fit the product on your dog

Please ensure to fit the product snugly, yet loose enough to allow one finger to fit between the strap and your pet's neck. GREAT! Now you have successfully put the Bark Control Collar on your dog and it's ready for training.

Notes: Mark the desired length, leaving some extra inches (if your dog is still young and will grow more or for thicker winter coat), and cut off the excess. Seal the edge of the cut strap by holding it above the fire for a few seconds.

Suggestions for the Appropriate Sensitivity Level

The environment noise, temperament, breed or size of your dogs may affect the bark control effect. Here are suggestions for selecting the appropriate sensitivity level based on different environment conditions.

Very Quiet Environment such as an indoor setting as if no one at home or late at night.

Level 7-8 is suggested

Normal Environment

Level 5-6 is suggested

Noisy Environment such as dogs playing or loud noises. (Ex. music playing, TV on in the background)

Level 1-4 is suggested

Warning Tips

The above suggestions are for your reference only, please adjust the bark control collar to the appropriate sensitivity level based on the actual

Frequently Asked Questions & Answers

Q: Why does the product not work when the dog barks?

A: First, make sure the product fits snugly, but loose enough that one finger can fit between the shoulder strap and your pet's neck. Some dogs bark weakly, in which case you will need to increase the sensitivity of the product. Thick hair in the neck area may also reduce barking, so trim the hair near the product area.

Q: Why is the product triggered sometimes in a noisy environment though the dog isn't barking?

A: Although we have optimized the bark detection system to the best, some environmental noises are likely to be similar to a dog's barking frequency, so there is a high chance of activating the product, please adjust the sensitivity level of the product. Level 8 is the highest level and level 1 is the lowest level. In this case try level 1 sensitivity. But generally, the sensitivity setting at level 5 is the best working level. Level 8 sensitivity is for quiet environments. Please use levels 1-5 in your daily life.

Q: Can I use this product while other dogs are playing?

A: Dogs will bark excitedly when playing. For your pet's comfort and safety, we do not recommend using this product in such an environment.

Frequently Asked Questions & Answers

Q: Will this product stop my dog's howling?

A: No, this bark control collar is only for barking detection. It cannot detect or stop a dog's howling.

Q: Can I charge this product with any type of charger?

A: No, please do not charge this product with a charger of 5V output voltage, because a charger with an output voltage of 9V or 12V may cause damage to the product.

Q: Will my dog stop barking completely?

A: The barking control collar effectively and humanely stops all barking when worn. Please do not wear it when not needed.

Q: Will the barking of other dogs activate my dog collar?

A: The bark collar can filter out most outside sounds, but if your other dog is too close to this collar, we recommend that you should use a sensitivity level 1 to reduce the activation of the product.

Q: Can I tie the leash around the collar?

A: Sorry, it might be stressful for the dog.
